Question 2:

A basketball is thrown towards as hoop that is three feet higher in the y direction and 25 feet away in the x direction. If the ball is thrown at an initial angle of 50 degrees, what must the initial velocity be for the ball to make it into the hoop?

acc
$$\dot{x}(t) = 0$$
 $\dot{y}(t) = -32.2$
Nel $\dot{x}(t) = V_0 \cos(50)$ $\dot{y}(t) = -32.2 + V_0 \sin(50)$
pas $\dot{x}(t) = V_0 \cos(50) + t$ $\dot{y}(t) = -\frac{32.2}{2} + \frac{1}{2} + V_0 \sin(50) + t$ $\dot{y}(t) = -\frac{32.2}{2} + \frac{1}{2} + V_0 \sin(50) + t$ $\dot{y}(t) = -\frac{32.2}{2} + \frac{1}{2} + V_0 \sin(50) + t$ $\dot{y}(t) = -\frac{32.2}{2} + \frac{1}{2} + V_0 \sin(50) + t$ $\dot{y}(t) = -\frac{32.2}{2} + \frac{1}{2} + V_0 \sin(50) + t$ $\dot{y}(t) = -\frac{32.2}{2} + \frac{1}{2} + V_0 \sin(50) + t$ $\dot{y}(t) = -\frac{32.2}{2} + \frac{1}{2} + V_0 \sin(50) + t$ $\dot{y}(t) = -\frac{32.2}{2} + \frac{1}{2} + V_0 \sin(50) + t$ $\dot{y}(t) = -\frac{32.2}{2} + \frac{1}{2} + \frac{1}{2$

$$3 = -24354 \left(\frac{1}{1.2}\right) + 29.7938$$

$$V_0 = \sqrt{\frac{-24354}{-26.7938}} = \sqrt{\frac{30.1487}{15}}$$
